About the book...

"STARS AND TREES-TREES OF THE NAKSHATRAVANAM" is a treasure trove of exiting information on the symbiotic relationship prevailing between man and trees. The authors have attempted to unravel the story of "Nakshatravanam" in an appealing format and it is intended to drive home the message of biodiversity conservation. The retelling has involved some degree of editing, but it has been ensured that whatever is written can be traced back to the original. Through its thematically structured pages, the book focusses on the merits and demerits of the 27 stars and their corresponding trees. The wealth of indigenous knowledge presented within throws light on the thoroughness and excellence of our ancient scholars in total health care management. The book is dedicated to the common man, whose mind it is intended to ignite, towards the cause of biodiversity conservation.

Stars and their corresponding trees govern one's health, wealth and prosperity

Exciting information on the symbiotic relationship between MAN and trees
